Clinical Data Analysis in R

Phase I — Introduction to R for Clinical Research

A Five-Session Evening Course for

Doctors · Nurses · Medical Researchers · Allied Health Professionals

Course Schedule

Five sessions · Every Tuesday · 8:00 pm · 90 minutes each

7 September – 6 October 2026

Many healthcare professionals collect valuable clinical data but lack the tools to analyse it. This practical course builds foundational skills in R, basic biostatistics, common medical statistical tests, and publication-ready tables and figures — with no prior programming experience assumed.

What You Will Learn

- Day 1** Introduction to R & RStudio
- Day 2** Understanding & Cleaning Clinical Data
- Day 3** Descriptive Statistics, Tables & Figures
- Day 4** Common Medical Statistical Tests
- Day 5** Introduction to Regression & Interpreting Output

Who Should Apply

- Medical Doctors & Residents
- Nurses
- Clinical Researchers
- Clinical / Hospital Pharmacists
- Public Health Professionals
- Hospital Research Staff
- Masters & PhD Students

Course Outcome

By the end of the course, participants will be able to analyse their own clinical data in R, choose and interpret appropriate statistical tests, and produce publication-ready tables and figures.
